Clinical Research Nurse in Oncology

Jewish General Hospital - Lady Davis Institute

Functions:

1. Provide protocol information with respect to the purpose of the study, potential risks and benefits for the patient and their family, to ensure their full understanding of the nature and procedures of the study.
2. Perform clinical assessment as well as all aspects of study visits for clinical trial participants, according to protocol requirements (e.g., vital signs, blood tests, ECG, assessment and management of symptoms and side effects, teaching).
3. Review test results and monitor patient’s progress.
4. Notify the attending physician of any medical condition as well as the study coordinators in order to coordinate subsequent treatments with the pharmacy and nursing services.
5. Document the procedures performed as well as the evaluations (Endovault or source documents) for each patient visit according to protocol requirements.
6. Respond to calls and emails from patients with medical issues and follow up with oncologists and study coordinators.

Qualifications:

1. Member of the OIIQ.
4. Minimum of two years of experience as a nurse (oncology is an asset).
5. Good knowledge of office software.
6. Thoroughness, precision, autonomy, initiative, sense of responsibility and the ability to manage several files at the same time are desirable qualities.

Status and Benefits:

1. Full-time day position, Monday to Friday.
2. Salary and benefits according to LDI scales and policies.

To apply:
